

Chris Moore

Robotics & Automation Technologist | Systems Integrator | Technical Lead

Electromechanical repair specialist with 20+ years of experience in systems integration, diagnostics, and troubleshooting in high-performance environments. Proficient in PCB rework, embedded systems, power distribution, and networking integration. Skilled in repair optimization, prototype maintenance, and process development, driving efficiency in diagnostics, automation, and technical mentorship. Now transitioning into robotics and automation, bringing precision equipment expertise and hands-on problem-solving to next-generation robotics innovation.

Work History

2022-03 -
Current

Systems Integrator | Service Technician

Chris Moore Designs LLC, Lakewood, Colorado

- Designed, programmed, and integrated **custom automation and lighting control systems**, ensuring **seamless operation** across hardware and software.
- Selected and optimized **embedded components** (LED pixel ICs, power supplies, network interfaces) for **efficiency, stability, and safety**.
- Developed **custom wire assemblies and rack-mounted PCs**, integrating **networking and control systems** for reliable automation.
- Diagnosed and repaired **electromechanical systems**, performing **SMD/through-hole soldering, power distribution, and cable assembly**.
- Created **troubleshooting workflows and repair runbooks**, improving **diagnostics, system uptime, and efficiency**.
- Led **multidisciplinary teams** (electricians, technicians, subcontractors) in system integration, ensuring **on-time project execution**.

2020-03 -
2022-02

Systems Integrator | Technical R&D

Temple Nightclub, San Francisco, San Francisco, California

- Engineered and integrated a **large-scale lighting, video, and LED pixel system** within **three days**, aligning multiple design visions into a functional system.
- Led **international procurement and logistics**, coordinating manufacturing and shipping from China to ensure **on-time delivery** of critical components.
- Developed **high-power distribution systems**, calculating **AC/DC loads, wiring, power supplies, and fuse protection** for large-scale installations.
- Integrated **networking and control systems** (Ethernet, SPI, rack-mounted PCs) for seamless, **real-time automation and system operation**.
- Designed **troubleshooting workflows and maintenance protocols** for **200+ robotic lighting fixtures**, optimizing long-term reliability.
- Interpreted **PCB schematics and wiring diagrams**, collaborating with manufacturers to develop **custom electronic components**.
- Led **multidisciplinary teams** (electricians, construction, HVAC, fire suppression) to execute installations under **tight deadlines**.
- Pioneered **rapid R&D solutions**, developing **3D-printed components and custom electronic assemblies** to solve critical challenges.

2016-03 -
2018-04

Service Technician

Brown Note Productions inc., Thornton, Colorado

- Performed **diagnostics and precision maintenance** on **electromechanical systems**, ensuring reliability in **high-demand environments**.
- Troubleshoot and repaired **LED video panels, robotic lighting, and A/V equipment**, resolving **complex mechanical and electronic failures**.
- Conducted **SMD and PCB-level repairs**, diagnosing and resolving **intricate circuitry and board-level failures** for **long-term functionality**.
- Led **repairs and assembly** for **cable systems, LED panels, and robotic lighting**, optimizing **system performance and reliability**.
- Developed an **inventory tracking system**, streamlining **failure logging, repair tracking, and parts management**.
- Standardized **maintenance workflows**, improving **efficiency and cross-functional collaboration** across technical teams.
- Trained and mentored **junior technicians**, providing hands-on instruction in **electronics repair, diagnostics, and system integration**.

Soft Skills

- Technical Leadership & Mentorship** – Training teams, developing workflows, process optimization
- Problem-Solving & Troubleshooting** – Diagnosing failures and implementing structured repair solutions
- Cross-Functional Collaboration** – Working with engineers, contractors, and manufacturers
- Adaptability & Crisis Management** – Operating under tight deadlines and high-pressure environments
- Inventory & Workflow Optimization** – Repair tracking, parts management, procurement planning

Hard Skills

- Networking & System Integration** – Ethernet, SPI, I2C, CAN, embedded controls
- Embedded Processors & Diagnostics** – Real-time data acquisition, system calibration
- Electromechanical Repair & Maintenance** – Troubleshooting and repairing complex systems
- PCB Rework & Soldering** – SMD, through-hole, and circuit board repairs
- Prototyping & Rapid Development** – 3D printing, custom fabrication, iterative R&D
- AI-Assisted Coding & "Vibe Coding"** – Leveraging LLMs to generate, debug, and refine code for automation, robotics, and control systems
- Power Distribution & Cabling** – AC/DC calculations, wiring, fuse protection
